GMBH

Our extensive selection of equipment

has products to create a perfect presentation for almost any purpose. The GigaVision name stands for top quality projection, sound and show control systems for Large Format Theaters. The SpectaVision System offers complete solutions for any special projection need. Whichever system and configuration you decide on, your visitors will always enjoy the best in picture and sound quality.

Projection Systems

A wide range of projection systems for 35 mm and 70 mm film is available to meet any need.

Our special format projectors unite the best elements learned in our decades of experience developing and producing cinema projectors with new and innovative ideas like our patented electronic sprocket drive. This drive concept, originally a special development for studio projection systems, has proven exceptionally reliable over many years and can be found in all important film studios and a great number of cinemas around the world.

Recently, we have created a new generation of projectors for large formats and special applications featuring unsurpassed image quality and offering the highest degree of reliability and user friendliness.

State-of-the-art platter systems, spool towers and endless loop systems round out our projection technology product range.

We also supply all the equipment and accessories necessary for a well functioning turn-key installation and ease of operation.

Our construction and development departments also fulfill special requests with reliable product solutions to meet your schedule.

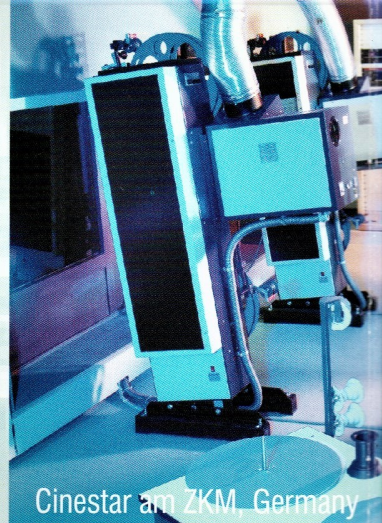

Sound systems

We develop a tailor-made sound system for you, based on our understanding of acoustics and your technical requirements, whether it is for a small simulation cinema or for a huge domed auditorium. In addition to selecting suitable loudspeaker systems and specifying their positioning, we also design individual sound racks. Our sound systems are always equipped with the highest quality processors, amplifiers and cross-overs to guarantee an unexcelled sound experience.

Show control systems and interfaces

Our systems can be equipped with various interfaces so that they can be easily coupled with external show controls and other equipment.

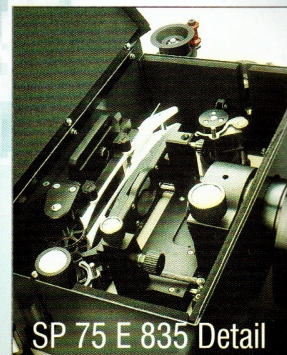

We develop and produce various show control and automation systems to fit any show-specific needs. This series extends from simple inexpensive controls up to highly complex, customer specific software solutions.

Rely on our expertise

We possess decades of experience both in product development and in project planning.

We design and construct our products to provide the gentle film handling essential for consistently high projection quality.

Our systems work absolutely reliably and are almost maintenance-free.

Our user-friendly systems reduce operating errors to a minimum.

We have a well-trained, highly qualified team with extensive technical know-how for installation and service.

A worldwide network of qualified partners is ready for service and support.

Kinoton means perfection

Kinoton is expert at providing tailor-made customer-specific projection solutions. Our decades of experience in the planning and technical installation of countless cinemas, studios and special projection systems for various uses in all parts of the world make us the ideal choice for your project.

Visionary artistic ideas have always been a welcome technical challenge to us. Background projection in opera houses like Milan's La Scala, the technical equipment for legendary performances at the famous Laterna Magica in Prague, the Australian pavilion at the world's fair in Seville are just a few examples. More recently the projection technology at the Autostadt Wolfsburg, the Phantasialand Leisure Park in Germany, the Planetarium Universitas in Rio de Janeiro, the 3D Cinema at UGC Strasbourg and the 3D Simulator Turbo Ride Theatre at Cinecitta, Nuremberg are reflections of our competence (see also our list of references).

Our experienced team will support you from your earliest planning stages until your project is complete.

Our technicians are experts at installing projection, sound and show control systems and in training your staff. When the project is finished you can still rely on our quick service in the rare case of trouble. A global network of experienced partners is ready to serve you.
