

## AUTOMATIC FILM SCRAPER

(PATENTED)

- ★ It considerably speeds up splicing, being entirely automatic in operation.
- ★ It avoids over-scraping and guarantees a join of maximum strength and cleanliness.
- ★ The complete answer on magnetic striped film.
- ★ It can be fitted to any existing "Premier" De Luxe Joiner.
- ★ The push/pull action removes the emulsion and binder from film stock, thus leaving the celluloid ready to be "welded".
- ★ It is simple, easy, and amazingly efficient, and a boon to anyone handling film.

*A user says—*

*"I have no hesitation in saying that in course of some 27 years experience of a variety of Film Splicers, excellent though your De Luxe Model is by itself, with your new Scraping Attachment, film joining is a positive delight."*

PREMIER PRECISION CINE EQUIPMENT

## PRECISION FILM JOINER

The basic Premier De Luxe Film Joiner illustrated on the left is suitable for joining all types of 8 mm and 16 mm film stock. The basic model can accept, without modification an Automatic Film Scraper and Heater Unit—all these accessories are described in this leaflet.

### SPECIAL FEATURES

- ★ Of high precision manufacture, the joiner is designed for use on both 16 and 8 mm. film stock.
- ★ Models for Positive and Negative/Reversal film joining
- ★ Special locating pins for perfect alignment and overlap irrespective of variance of film stock.
- ★ Rubber feet to prevent unit sliding.
- ★ Can be fitted with our unique Automatic Film Scraper, Heater Unit and Support Bracket.
- ★ All component parts interchangeable—Spares always available.
- ★ The finest Precision Joiner on the market—proven by years of service in leading Laboratories, Film Libraries, Government Departments, Editing Rooms, T.V. Studios, etc. . . .
- ★ Special model available for 16 mm unperforated microfilm.

#### SENIOR De Luxe MODEL (See leaflet 100A)

Having specially enlarged film bed for reverse insertion of single perforation film stock and double scraping action. Modelled from 35 mm unit to meet particular professional requirements.

#### NOTE.

When ordering state whether 3/32" or 1/16" join

### SPECIFICATION

Each piece of film is held by separate clamps and trimmed automatically by cutters underneath each film bed. Flexible pressure springs give *correct* and *even* pressure to remove air bubbles and prevent buckling of the join.

Attractively finished in Polychromatic and Polished Nickel Plate it is available in two models:—

#### (1) Positive Film Model. (16/8 mm) [See diagram 'A']

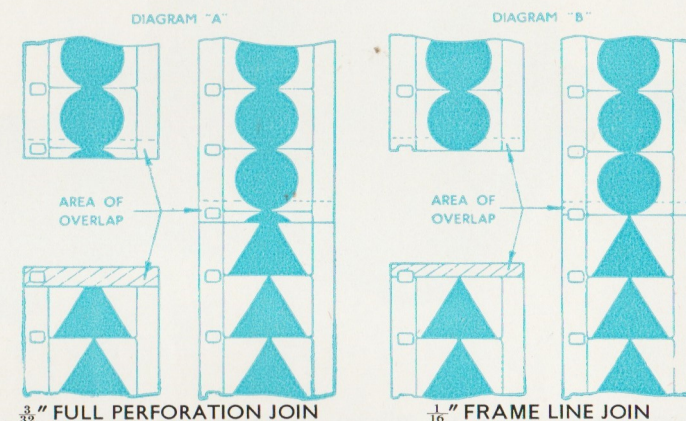

This model gives a  $\frac{3}{32}$ " full perforation overlap join resulting in an extremely strong join most suitable for use on all 16 mm prints (B & W and colour). It is essential Equipment for Film Libraries, for rough cutting in Editing Rooms and film repair work generally.

#### (2) Mask Line Model. (16/8 mm) [See diagram 'B']

Designed to give a narrow  $\frac{1}{16}$ " Frame Line Join, it has been specially developed for editing purposes to avoid a composite frame when marrying two *different* film shots.

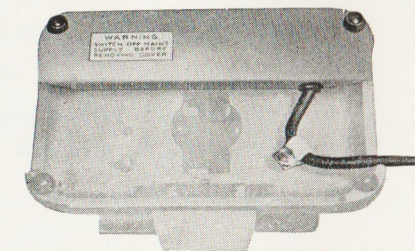

It forms an essential equipment when editing 16 mm original material (Negative, Reversal B & W or Colour), and its narrower overlap is particularly useful on all 8 mm film stocks.

(When ordering please state model required)

### HEATER UNIT

- ★ Cuts splicing time.
- ★ Avoids any possibility of cold air bubbles endangering joins.
- ★ Easily fitted to any De Luxe Film Joiner.
- ★ Adds speed and pleasure to joining at little extra cost.

A user writes—"...not only does it produce superbly neat and accurate joins but does so rapidly; the Machine really is a joy to use!..."
