

FILM STORAGE BIN

These bins are designed to fulfil the Council Regulations for the storage of films in Cinemas, in excess of what is required for the day's programme; thus the films for Sunday shows can be suitably accommodated in one of these bins which are usually located outside the operating room on the roof of the theatre.

They are constructed in stout galvanised iron, and are made in one size only 30½" long × 20" wide × 15½" high to accommodate 20 15"-diameter tins or spools, each having a capacity of 2,000 feet of film.
