

# EQUIPMENT *for* **CINEMASCOPE**

- *Non-magnetic and Demagnetised Parts.*
- *Scrapes both sides, magnetic tracks from the back, emulsion from the front.*

These SPOOLS are extremely strong and robust. They have all the advantages of Premier Patent Spools and Hubs which for so many years have been standard in Projection Rooms.

The Spools can be supplied in three sizes 15" (2,000 ft. approx.), 17" (3,000 ft. approx.) and 22" (5,000 ft. approx.) All can have a zinc alloy hub or a plastic hub, the advantages of the plastic hub being its lightness; both are non-magnetic and both hubs accommodate steel bushes for the various sizes of Projector spindles, viz.:  $\frac{5}{16}$ ",  $\frac{3}{8}$ ",  $\frac{1}{2}$ " or 9mm.

Manufactured for long life and in the best tradition of Premier Spools they are attractively finished in grey enamel:

15" — £1.17.6d.  
17" — £3. 0.0d.  
22" — £4. 0.0d.

## The PREMIER 35mm. DE LUXE FILM JOINER

for CinemaScope has been specially designed for use with film stock having CinemaScope (Fox hole) size perforations. Similarly constructed to the normal PREMIER De Luxe Joiner it gives a precision  $\frac{3}{32}$ " between perforation join on the mask line.

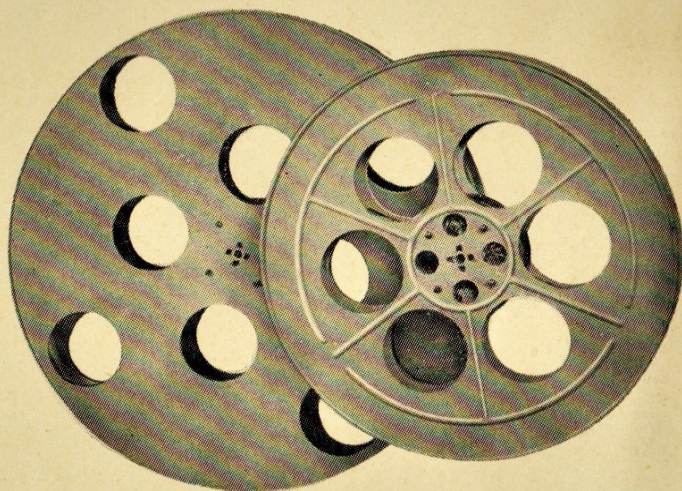

Constructed with special non-magnetic parts it is a necessity wherever CinemaScope Film has to be handled.

With this Joiner the magnetic tracks are easily removed, prior to removing the emulsion in the normal way.

In every way up to the high standard of Premier Joiners, it is strongly constructed, precision machined and attractively finished in grey polychromatic enamel:

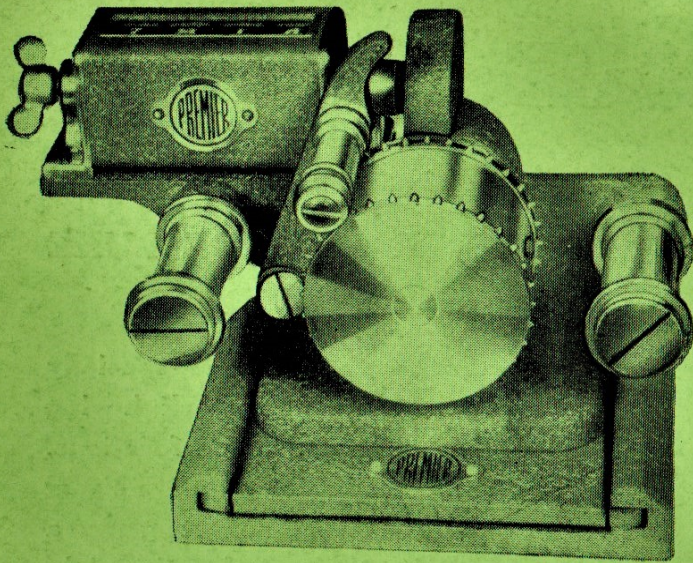

~~£12.0.0d.~~

£15. 0. 0d.

- *Non-magnetic.*
- *Supplied for any standard projection spindle.*

This new PREMIER MEASURER has been designed for use with film having either CinemaScope (Fox hole) or standard size sprocket holes.

The sprocket is an eight picture sprocket directly geared to a four figure counter reading up to 10,000 ft. A frame counter can be fitted at slight extra cost.

The Measurer is fixed to a plate fitting into a slide. This slide is drilled for easy fixing to a bench or table.

Two models are available, for a horizontal or a vertical rewriter, both elegantly finished in grey crinkle:

**£14.14.0d.**

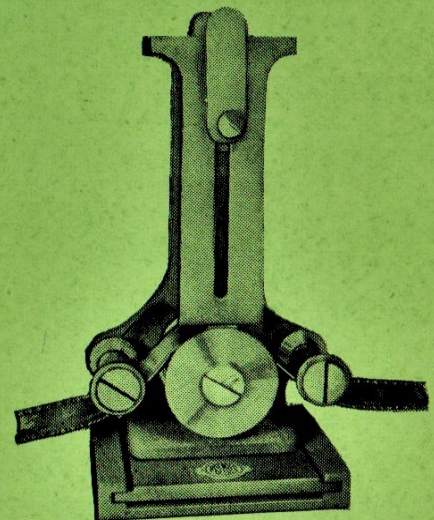

(Frame Counter £3.3.0d. extra)

- *Can be used with CinemaScope or Standard Film.*
- *Non-magnetic, Duralumin rollers and sprocket.*

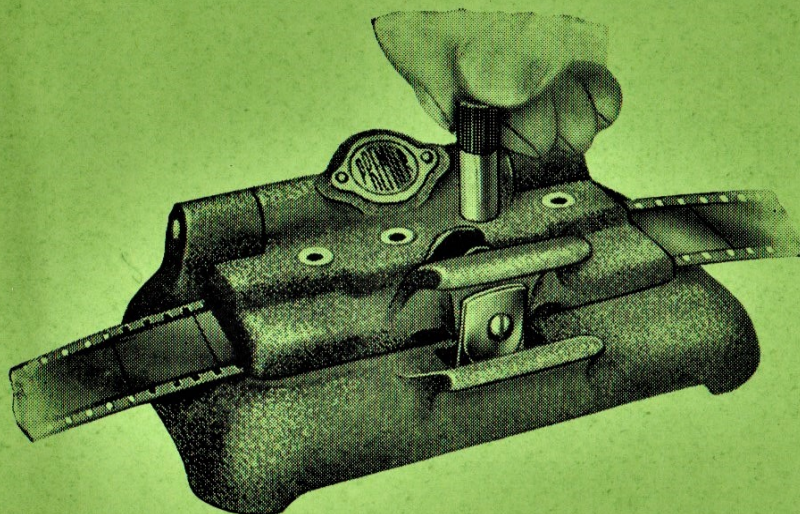

This PREMIER WAXER has special non-magnetic rollers and castings to eliminate stray magnetism. It has been tried and tested successfully to ensure that a thin layer of wax is deposited on the edge of the film so preventing damage to the emulsion when passing through the projector. Extremely strongly constructed and accurately machined this Waxer is finished in grey crinkle enamel:

**£7.7.0d.**

Boxes of Wax — 5/-

- *Perfect edge Waxing.*
- *Non-magnetic Duralumin Rollers.*

- *Non-magnetic.*
- *The Special Scribing Tool prevents film damage.*

This PREMIER CUE DOT MARKER has been specially designed to prevent film damage and mutilation.

The Scribing Tool forms a circular mark similar to the B.S.I. Specification. This Tool is spring loaded and cannot damage the film. Precision machined and attractively finished in grey crinkle this marker is an essential for 35mm. Release Prints.

**£3.17.6d**

**£4. 17. 6d.**
