

FILM STRIPPER UNIVERSAL MODEL

(SPECIALLY DESIGNED FOR ADAPTION WITH ANY MAKE OF RE-WINDER)

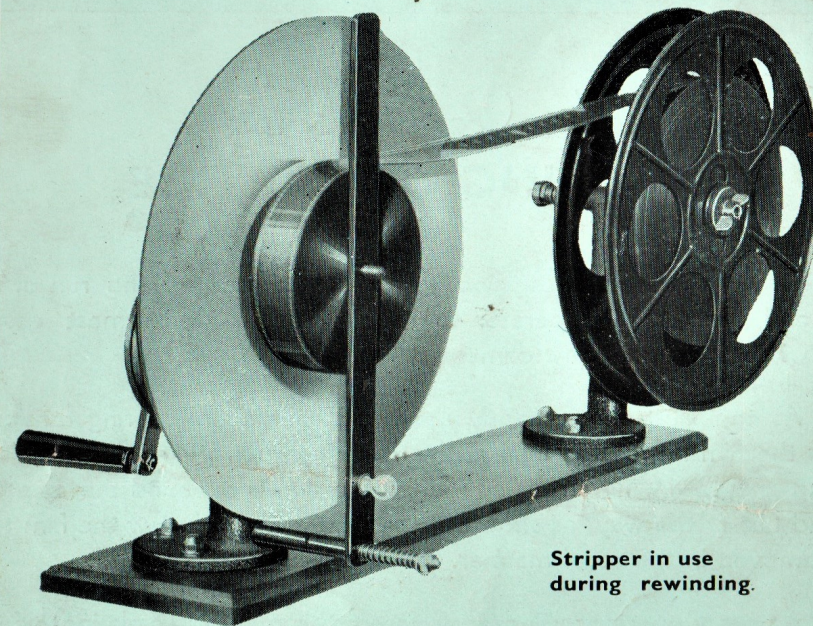

As depicted in the illustration the Stripper is mounted in a bearing which can be secured to the Rewind Bench in the appropriate position, so that the bar is in contact with the sliding tube on which the film is rewound and is just proud of the film.

Should the sliding tube project too far beyond the film, it should be reduced until it is just proud of the film.

The price of this model is :

37/6

FILM STRIPPER

FILM STRIPPER

The Very Latest **SPOOLING-OFF DEVICE**

This device facilitates spooling-off at the end of the run of a film and enables the operator to spool-off with the utmost ease and without causing any damage to the film.

As the illustrations clearly show, a steel bar on a spring tension holds the film in position against the stripping plate and guides the film during the rewinding process. When the film is rewound the bar is folded out of the way, as shown in the illustration, to allow the film to be removed in the usual manner.

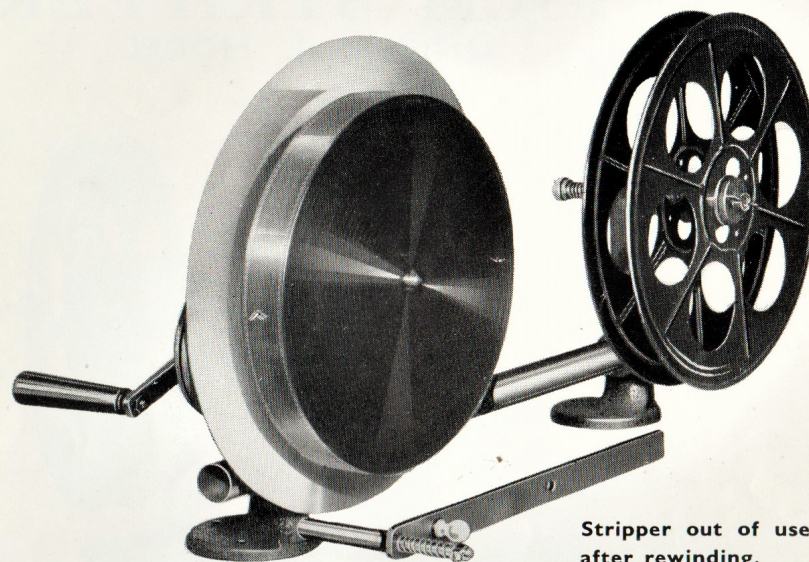

As every operator will readily agree, this method of plating-off is infinitely preferable to any other and cannot possibly cause damage to the film. Moreover, it is located on the Rewinder itself and does not have to be attached and dismantled with every spool and film that is rewound.

It can be easily adapted to any existing Rewinder of our make or similar and the cost is very moderate, viz.

Including cost **37/6** of fitting

Price of Rewinder complete with Stripper either the bar or board model:

~~£97/7/6~~
£10/-/-

Special Features

1. It is an integral part of the Rewinder, with no loose parts which can be mislaid or lost.
2. Used in conjunction with the rotating disc, it cannot damage the film.
3. It ensures perfectly even rewinding.
4. It leaves the operator free to examine film during rewinding.
5. Folds down when out of use.
