

# *Strong Reflections*

# *Strong Reflections*

*Simple as a projection lamp reflector may appear, a trip through the mirror plant of the Strong Electric Corporation at Toledo is impressive of the infinite and painstaking care necessary to its production.*

*The design of an elliptical reflector requires a staff of skilled technicians to compute the exacting physical and optical requirements necessary to pick up the light from the positive arc crater and focus light accurately at the film aperture.*

*Gauges are developed to these pre-determined computations and the actual glass forming molds are accurately ground to match these master gauges.*
