THE CNR 335 PLATTER SYSTEM

A non-rewind, film-handling
device to complement our
range of labour saving modern
projection equipment

Rank Strand Cinema

P.O. Box 51, Great West Road, Brentford, Middlesex, TW8 9HR.
Telephone: 01 568 9222 Telex 27976 Cables: Rankaudio Brentford

The CNR355 platter has 3 main advantages over a conventional vertical long-playing device:

- It eliminates the need for rewinding between shows.
- It has a total capacity per deck of approximately 26,000 feet (over 7,500 metres), sufficient for over 4½ hours of uninterrupted running time, thus dispensing with intermission relacing.
- It reduces the risk of film damage as the horizontal feed and take-up system, avoids inter-layer weight and tension.

Features

- 3 completely interchangeable 53" (1.35 metre) diameter aluminium feed/take-up decks.
- Variac continuously adjustable transformer, controlled by film tension from the projector, ensuring even feed and take-up.
- Direct rim drive DC motors for smooth, quiet operation.
- Simple to install and operate with easy maintenance.
- Separate make up/breakdown table with variable speed take-down motor and make up/ take-down brake.
- Can be installed with most modern types of projection equipment and is ideal for use with automation systems.
