THE HI-BRITE SCREEN

- The screen in folded position is illustrated on the back of this leaflet
- Hood unit may be fitted as shown on the back of this leaflet

A new special screen material giving a bright image at a wide viewing angle.

It combines the best features of all current models, being completely collapsible, but designed for mobility.

All metal construction with high quality ball-bearing castors on the stand, which provide frictionless movement.

The elevation tube to the projector platform is drilled to allow the insertion of an eyebolt at predetermined heights for use with different optical centres.

Platform allows free swivelling of the projector platform without the necessity of reclamping.

The Projector platform is fitted with side tilt adjustment to counteract floor unevenness when squaring the picture to the screen.

Screen size : 24" x 18"

Cabinet size :

Erected: 21½" high  
27½" wide  
35" max. length
